
Trickle Impregnation Plants

<http://www.whitelegg.com/products/electric-motor/electric-motor-manufacture/trickle-impregnation-plants>

Excellent process for impregnation with high slot fill requirements.

Stator is heated and rotated as the resin is poured onto the winding

Impregnates and cures in one operation

Saves time and reduces resin waste

All power systems are infinitely variable with AC and DC supplies

Precise temperature control and rotation speed

Latest computer controls
