
HCM Medium Duty Coil Winding Machines

<http://www.whitelegg.com/product-search/medium-duty-coil-winding-machines>

Medium Duty Coil Winding Machines. Ideal for winding electric motor coils and transformer coils.

- Ideally suited for the winding of electric motor field coils for motor up to approximately 250 kW.
- It is equally suited for the winding of transformer coils up to 55 kg.
- Solid welded steel fabricated base - very robust.
- The machine is driven by a single phase motor with an inverter speed controller.
- Speed range is 0-700 rpm in three gear ranges via a heavy duty gearbox. The correct torque can therefore be selected for each job. The maximum torque is 980 Nm. The maximum speed can be set by a panel mounted potentiometer.
- The machine is supplied with a foot pedal for the independent speed control up to the maximum preset on the potentiometer.
- The machine is fitted with a electronic digital revolution counter with pre-selection so that it will slow down before the final revolution count is reached and, with the aid of an electric brake, stop at a precise angular position. This is particularly useful when winding sets of field coils, and the operator is always able to obtain the cross-over in the correct position.
